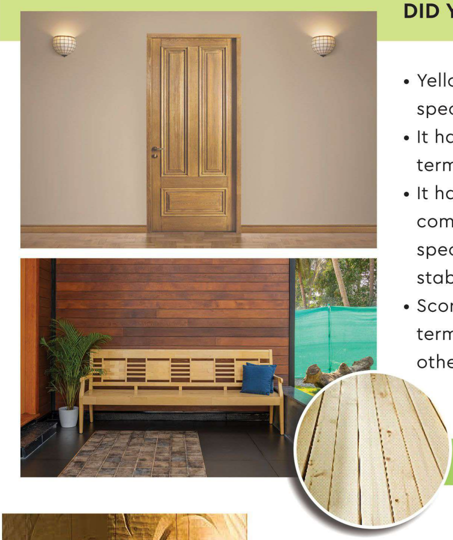
Yellow cedar - a versatile wood species for both outdoor and indoor furniture

Yellow cedar is ideal for outdoor and indoor furniture, making it the perfect choice for any home. Whether you want a touch of natural beauty to your garden or bring warmth and elegance to your living room, yellow cedar is the way to go.



DID YOU KNOW?

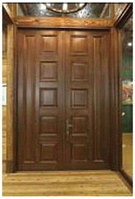
- Yellow cedar is among the most durable wood species with exceptional longevity.
- It has inherent extractives, making it naturally termite and decay resistant.
- It has excellent strength-to-weight-ratio comparing favourably with popular hardwood species in terms of stiffness, strength and stability.
- Scores over popular hardwood species in terms of planning, mortising and nailing and other wood working properties.

Yellow cedar

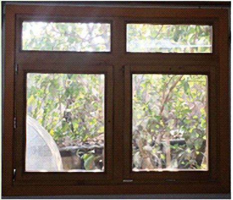
Applications

- Door/windows and door/window frames
- Indoor furniture
- Joinery, decorative panelling, furniture, carving and moulding etc.
- Pergolas, gazebos, garden furniture, cladding, decking, shingles and stairs

Suitability for door, door frames and windows

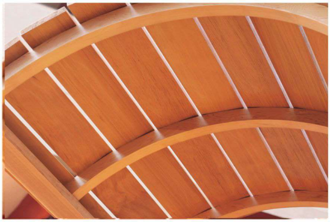


Wood species used for these applications need to meet very demanding conditions as opposed to wood used for interiors. The wood species thus used must be durable and have excellent dimensional stability. And Yellow cedar ticks the right boxes for such applications.



Suitability for outdoor applications

Wood used in outdoors applications should be able to withstand harsh weather conditions and be resistant to termites and decay. Here too, yellow cedar meets the requirement as a naturally durable wood species.



Suitability for furniture

In furniture products, customers prefer design, functionality, appearance and strength. In addition, customers also prefer light weight and easy to move furniture.

Due to its fine, even texture and easy workability, yellow cedar is a preferred choice for carving and turning applications.

Its density across single growth rings is quite uniform making it a good species for carving and such exquisite woodworking.
