Event

The FII Booth and the Gold Lounge for select architects were the centre of attraction at the trade fair – Index 2019. Canadian Wood species of western hemlock, western red cedar and Douglas fir were used to create a warm and inspirational networking space. FII was the sustainability partner at the 31st edition of Index 2019, a trade show on architecture and interior design and materials, held at BEC, Mumbai from May 1-4, 2019.

The Canadian Wood booth attracted over 400 architects, interiors designers, manufacturers, real estate developers and timber importers and traders. The event showstopper was the Gold Lounge

at the Central Design Atrium. This networking arena of 133sq m was built with 100% certified Canadian Wood species from B.C. Canada. Flower petal inspired lounge chair made from western hemlock, a 28x28 feet life-size pergola in western red cedar and a rustic bar

cabinet, counter and stools in knotty Douglas fir caught everyone's attention. The door and door frames on display were made of western hemlock and Douglas fir; in addition, a door and window set made in yellow cedar was also on display. Other items such as solid wood sofas, upholstered furniture, tables and benches/stools etc. all made in (SPF) spruce-pine-fir, western hemlock and Douglas fir completed the exhibits. Outdoors display of western red cedar decking and an outdoor bench with canopy and planters completed the picture.

The different products on display at the Gold Lounge and the FII Booth made with Canadian Wood species were made by manufacturers from different parts of India.
